The number of seniors (60+) across the nation is growing and far too many struggle with hunger and food insecurity.

Nationally, 9.5% of households with seniors face food insecurity. In Vermont, 6.6% of households with seniors face food insecurity.

Due to income constraints, food-insecure households with older adults do not have consistent access to enough food for healthy, active living. The impact of senior hunger extends well beyond an empty stomach and wallet.

---

**Seniors Struggling With Food Insecurity may Experience a Number of Challenges:**

- **Food running out**
- **Skipping meals**
- **Choosing between food and medicine**
- **Postponing medical care**
- **Poor health outcomes**
- **Higher health care use and costs**

SNAP, the nation’s first line of defense against hunger, is critically important to seniors.

In addition to improving the food security, health, and well-being of seniors, federal SNAP dollars stimulate local economies through assistance that goes directly to struggling seniors to purchase food.

### To get more seniors participating in SNAP, states and anti-hunger advocates can:

**Educate**
policy makers on the importance of SNAP in addressing senior hunger

**Partner**
with health care providers, senior centers, faith-based organizations, and retailers to counsel seniors on SNAP benefits and to provide application assistance

**Adopt**
state practices and policies to help ease barriers to SNAP enrollment and to ensure seniors receive the maximum amount of SNAP benefits to which they are entitled
